

Figure 1. The effect of Glycerol on 5'-3' polymerization activity of *Bst*-II DNA Polymerase

Figure 2. Low-Temperature Amplification in 40% glycerol

M GeneRuler™ DNA Ladder (MBI, Fermentus)

1. LT-Amplification in 40% glycerol (template:16ng/ul)
2. LT-Amplification in 40% glycerol (template:160ng/ul)

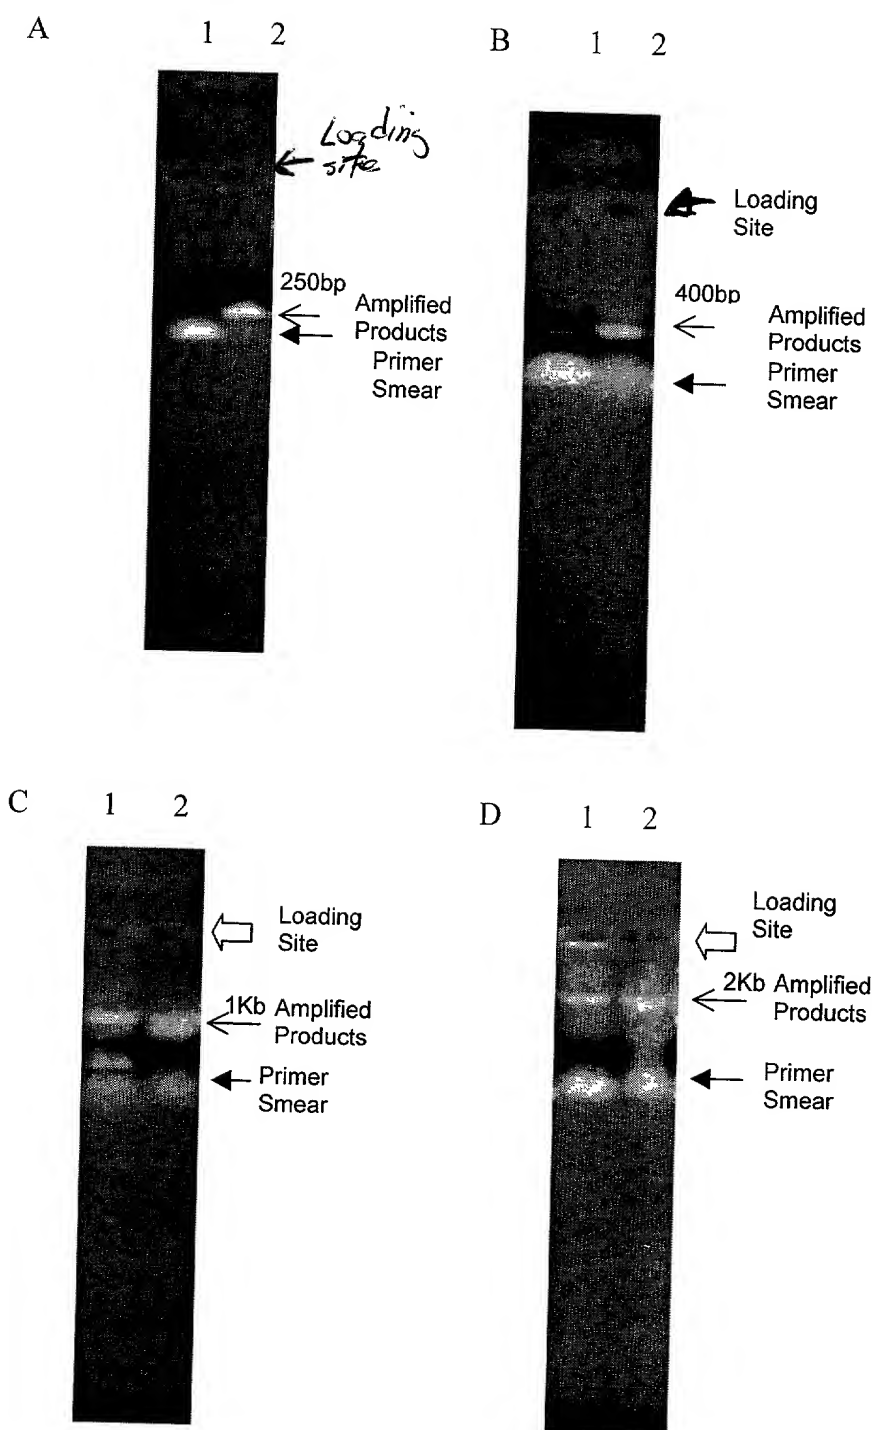

Figure 3. Low-Temperature cycle primer extension in 35% glycerol (lane 1) and in 15% glycerol (lane 2) with amplified products of different bp lengths.

Amplified products: A. 250bp; B. 400bp; C. 1kb; D. 2kb

Figure 4. Low-temperature cycle extension of 17mer and 30mer primers with moderately thermostable DNA polymerases and Klenow fragment.

1000000 15187850

Figure 6. Various temperature steps for cycle primer extension by a moderately thermostable DNA polymerase, Bst-II, with no glycerol or 15% glycerol
